

FIG. 1

FIG. 1 is a block diagram of a network architecture. The network architecture includes a central server system (12) connected to the Internet (10). The Internet (10) is connected to a group of desktop computers (14) and a group of other internet capable devices (16). The other internet capable devices (16) include palm devices, webtv, etc. The central server system (12) is also connected to the other internet capable devices (16) via a secure socket layer (SSL) connection. The central server system (12) is also connected to a group of mobile devices (18) via a wireless connection. The central server system (12) is also connected to a group of other internet capable devices (16) via a wireless connection.
